

The figure displays a 2D plot with a 4x4 grid of points. The x and y axes are labeled from 0 to 8, with major grid lines every 2 units. The points are distributed as follows:

- Black Dots:** Located at the intersections of the grid lines where both x and y coordinates are even (0, 2, 4, 6, 8).
- Blue Circles:** Located at the intersections of the grid lines where both x and y coordinates are odd (1, 3, 5, 7).

The blue circles vary in size, with the largest circles at (1,1), (3,3), (3,4), (4,1), (4,3), and (4,4). The circles at (1,3) and (3,1) are medium-sized, and the circle at (5,5) is the smallest.
